PROFESSIONAL SUMMARY

Dedicated and solution-oriented Python Full Stack Developer with 2 years of professional background in NOC Engineering and infrastructure management. Proven expertise transitioning heavy technical workflows into full-stack architecture, featuring hands-on experience building scalable web applications with Django, PostgreSQL, and secure REST APIs, paired with dynamic frontend development in React.js. Highly skilled in implementing task automation architectures using Python (Playwright) to significantly lower operational overhead. Demonstrates robust analytical capabilities, clean-code methodologies, and deep routing/switching comprehension to engineer reliable, high-performance web systems.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, HTML5, CSS3
Backend Frameworks	Django (Primary), Node.js, FastAPI (Conceptual)
APIs & Databases	REST API Design, Implementation & Documentation; PostgreSQL, MySQL, SQLite
Cloud & DevOps	AWS (EC2, S3), Git & GitHub, Linux, Docker (Conceptual)
UI & Frontend	React.js, Tailwind CSS
Automation & Network	Playwright (Web Automation), System Automation Scripts, Network Monitoring, TCP/IP, Cisco Routing & Switching

PROFESSIONAL EXPERIENCE

NOC Engineer	<i>New Delhi, India</i>
Leon Communication Technologies Private Limited	Oct 2024 – Present
- Engineer operational workarounds and provide infrastructure-level network troubleshooting to maintain high network availability. - Acquired robust hands-on configurations on enterprise core routing/switching platforms, specifically CISCO ASR 920 series routers. - Utilize automated network infrastructure tracking software (EPNM) alongside managing CP Plus IP camera remote configuration, alignment, and network installation maps. - Spearheaded daily corporate client communications, resolving high-tier network latency tickets and escalating system errors within SLA boundaries. - Automated internal repetitive data tracking workflows through custom Python scripts, accelerating cross-team tracking metrics.	
Cyber Security Intern	<i>Remote (Work From Home)</i>
Cyber Security Internship Program	Dec 2023 – Apr 2024
- Mastered essential Linux system administration principles, environment configurations, and shell hierarchies. - Developed lightweight secure bash/python environments to audit basic directory scripts and access control logs.	

PROJECTS

Web-Based Network Monitoring & Automation Platform

Tech Stack: Python, Django, SQLite, HTMX, Tailwind CSS, ChatGPT

- Engineered an end-to-end web framework designed to track live network device health, automate dashboard data delivery, and generate Ports alerts.
- Designed backend integrations and automated login parameters for localized networking routers.
- Built an optimized centralized live monitoring dashboard leveraging Tailwind CSS to maximize infrastructure visual diagnostic efficiency.
- **Impact:** Re-engineered traditional system visibility protocols, significantly speeding up active troubleshooting windows and cutting infrastructure downtime.

Online Expense Splitter

Tech Stack: Python, Django, Aiven, SQLite, ChatGPT, Tailwind CSS

- Architected a secure and scalable full-stack web application using Django to automate shared expense tracking and resolve balance calculations among real-time group users.
- Developed an intelligent balance-calculation engine that accurately maps financial transactions, tracks liabilities, and processes a complete, well-organized transaction ledger.
- Designed a responsive, interactive user interface using Tailwind CSS, incorporating smart features to analyze spending patterns and enhance transparent group collaboration.
- **Impact:** Completely eliminated calculation errors and manual tracking dependencies, significantly improving financial transparency and record-keeping efficiency.

EDUCATION

Master of Computer Applications (MCA)

New Delhi, India

Indira Gandhi National Open University (IGNOU)

Graduation: 2026

CERTIFICATIONS

- **Cisco Implementation and Administration (CCNA 200-301)** – Coursera Specialization | *June 2026*
Verification URL: <https://coursera.org/verify/specialization/W0YUNC70I0UH>
- **Master in Full Stack Development (Python)** – ITvedant, New Delhi
- **Cyber Security Certification** – Scholar (Online)

CORE COMPETENCIES

- Backend API Optimization & Architecture
- Automation Pipeline & Performance Tuning
- Advanced Full Stack Troubleshooting & Debugging
- System Infrastructure Architecture & SQL Proficiency
- Scalable Database Design & Administration
- Cross-functional Technical Team Collaboration
